December 21, 2006.

To Whom It May Concern:

Integra Castings, founded in 1990, is a gray and ductile iron foundry with the capacity to pour castings up to 4,000 lbs. We are proudly ISO 9001:2000 Certified.

In Spring 2006 we engaged the services of OEM Consultants to conduct analysis and lead training in Lean Manufacturing principles and methodology. One of our challenges is to find workers in this competitive market. We contracted OEM's services in order to safely and efficiently increase our output without relying on increased staffing levels.

OEM Consultants identified areas of focus and opportunity for capital improvements that will increase our output. We are pleased to continue our relationship with OEM Consultants as we take Integra Castings into the next phase of our Lean journey. We will be working with OEM to redesign and streamline our operations in order to achieve maximum production levels without sacrificing employee safety; making each person on the shop floor a vital contributor to our end product.

It is our pleasure to recommend OEM Consultants to any organization looking to bring about improvements in production values and efficiency. We at Integra Castings Inc. continue to be impressed with the level of commitment, professionalism, attention to detail and focus that OEM has brought to this partnership, and we look forward to continuing this positive endeavour.

Sincerely,

Rick Bell  
President & General Manager  
Integra Castings Inc.
